

INTELLIGENT HEAT DETECTOR

Features

- Fixed temperature rate-of-rise detector.
- Programmable for ordinary or intermediate detection.
- Equipped with tri-color status indicator lights.
- Compatible with the Fike CyberCat® and Cheetah® Xi intelligent control panels.

General

This detector can be programmed for a set-point range of 135-170°F for ordinary detection or 175-190°F for intermediate detection. Detectors in the ordinary range can be programmed for either fixed temperature or 15°F rate-of-rise operation, while detectors in the intermediate range are fixed-temperature only. A remote LED annunciator —which can follow the sensor LED operation or be independently controlled— is available as an accessory. An isolator version of this detector provides complete short-circuit isolation for NFPA 72, Class X wiring if used with an isolator base.

Compatible with the Fike CyberCat® and Cheetah® Xi intelligent control panel, the detector is configured using the programming software from each panel. Once configured, parameters are then stored within non-volatile RAM in the detector, with status updates communicated directly to other devices connected to the panel. This direct communication provides faster notification of an event and the opportunity to respond more quickly.
